ECMAScript Lab1

1- Define an array of numbers (only let is allowed)

   ✓ Sort them ascending then descending (using array sort method and Arrow functions)

   ✓ Filter numbers larger than 50 (using array filter method and Arrow functions)

   ✓ Display Max and Min Numbers (using math methods and spread operator)

2- Define javascript function that takes only 2 arguments operator and any numbers of integers (using Rest operator) then display the result of operation on console on one line (using substitution $ with bactecks `) as follow
"result of sum operation for 3,1,6,3 is 13"

3- Create constant project anonymouse object after takeing properties names and values from user (using object literals)
Note: names are projectId , projectName ,duration and printData which console.log all project data

   Finally: try all lecture code
